## 1 Project: Chatmood

For the last project, **Chatmood**, I explored the previous work about conveying emotion with emoticons[9, 8] or other aids[12, 10] in online text chatting. The purpose of **Chatmood** is to motivate social network site users to label their emotions during online text chatting, I also read papers for affective labeling [2] and research about gathering emotion tags from twitter [7, 11]. On the other hand, I claim that the label collected with **Chatmood** is context dependent, so, I need to compare it with other context dependent corpus [1].

## 2 Project: Sports

The purpose of this project is not decided yet. I can only say that it is about sports [3, 4, 5, 6].
